

**Humanitarian project  
of health care institution  
”Lyakhovichi central regional hospital“**

<b>1. Name of the project</b>	”Modern material and technical base of health care in Lyakhovichi district“
<b>2. Duration of the project</b>	12 months from the start of the project
<b>3. The applicant organization proposing the project</b>	Health care institution ”Lyakhovichi central regional hospital“
<b>4. The project goal</b>	Creation of conditions conducive to the conduct of diagnostic and treatment research at the modern medical level, using the latest medical technologies that meet international standards and the most modern medical equipment; improving the quality of treatment and diagnosis, the availability of new research methods for the population of the region
<b>5. Tasks planned for implementation in the framework of the project</b>	<ul style="list-style-type: none"> <li>- improving the quality of service to the population of the district;</li> <li>- purchase of modern medical and diagnostic equipment</li> </ul>
<b>6. Target group</b>	<ul style="list-style-type: none"> <li>- population of Lyakhovichi district;</li> <li>- population of neighboring districts;</li> <li>- foreign citizens</li> </ul>
<b>7. Brief description of project activities</b>	<ul style="list-style-type: none"> <li>- Acquisition of a fibrobronchoscope (1 unit), a stationary high-end ultrasound diagnostic apparatus (1 unit), a video gastroduodenoscope (1 unit), a laparoscopic stand (1 unit);</li> <li>- professional development of doctors (if necessary) by sending them to courses and workplaces to other medical institutions of the region</li> </ul>

<b>8. Total funding (in US dollars) – 278 000</b>	
<b>Donor funds</b>	250 200
<b>Co-financing (district budget)</b>	27 800
<b>9. Location of the project</b>	Republic of Belarus, Brest region, Lyakhovichi district
<b>10. Contact person</b>	Gavdis Mikhail Ivanovich, leading economist, 801633 6 24 30

**For reference:** The population of Lyakhovichi district is the oldest among all the districts of the Brest region. Also, the district can be classified as rural (about 60% live in rural areas). Over the past few years, there has been a sharply negative trend in the demographic situation of the district - an increase in mortality (about 500 people per year). There is also a downward trend in fertility. A number of diagnostic and treatment studies are not available to residents of the area due to the lack of necessary medical equipment in the institution for their conduct, and the quality of the studies performed on existing equipment suffers, as it is physically and morally outdated and often subject to repair. The population of the district receives the missing spectrum of medical services and research in various cities (the city of Baranavichi, the city of Brest, etc.) in both the region and the republic. However, not all patients can (want) go to other cities to the necessary number of studies (for example, the elderly, lonely, disabled, etc.). Often, a study entry can reach several months and, moreover, there is a certain limit, which further negatively affects the treatment of patients and the detection of their diseases, both in the early and late stages, and, consequently, leads to a shortening of life.
